Advanced Lens Implant Questionnaire

When a cataract is removed, an artificial lens is permanently placed inside the eye to take the place of the hazy natural lens. Advanced lens implants are available that can reduce your dependence upon glasses compared to standard lens implants. However, the additional cost is not covered by insurance. This questionnaire will assist us in determining which, if any, of these advanced implants is appropriate for you (assuming that you do not mind the additional cost and are interested in them).

1. After surgery, would you be interested in seeing well **without glasses** in the following situations? Please place an "X" on the following scale to describe your motivation to reduce dependence on glasses:

   Distance vision (driving, golf, tennis, other sports, watching TV)

   [----------|----------]
   don't mind glasses at all times — somewhat interested — I hate glasses!

   Intermediate vision (computer, menus, price tags, cooking, board games, items on a shelf)

   [----------|----------]
   don't mind glasses at all times — somewhat interested — I hate glasses!

   Near vision (reading books, newspapers, magazines, sewing)

   [----------|----------]
   don't mind glasses at all times — somewhat interested — I hate glasses!

2. Place an "X" on the scale to best describe you in terms of **night vision:**

   [----------|----------]
   I require the best possible night vision. — I want to be able to drive comfortably at night, but I would tolerate some imperfections. — Night vision is not particularly important to me.

3. If you **had** to wear glasses after surgery for one activity, for which activity would you be **most** willing to use glasses?

   ____**Distance Vision** ____**Intermediate Vision** ____**Near Vision**

4. Please place an "X" on the following scale to describe your personality as best you can:

   [----------|----------]
   easy going — perfectionist
